

HIE and public health partnerships improve community outcomes

How HIEs can partner with public health organizations in their states can utilize social determinants of health to impact outcomes and improve their communities

Overview

The pandemic has created an opportunity for HIEs and public health organizations to work more closely together. Access to reliable, trustworthy data – including social determinants of health (SDOH) – enables healthcare organizations to achieve complete patient views.

The environment in which people live and work factor into 80% of overall health outcomes. The opportunity to align what HIEs and public health entities know is the key to managing – and protecting – population health.

The challenge

Much of the information that public health organizations need to effectively understand their communities sits in siloed databases inside and outside of their organizations.

One state in the Western U.S. had a longstanding challenge determining if they had an accurate Medicaid roster. They also suspected that there were federal programs like the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) that were being under utilized in the state based on discrepancies between the Medicaid and WIC rolls.

HIGHLIGHTS

An independent, nonprofit HIE in the Western U.S. has been using social determinants of health (SDOH) to help its state improve analytics and reduce health inequities.

The partnership has facilitated tailored outreach, comprehensive care coordination, and powerful engagement with their communities.

Social determinants of health factor into 80% of health outcomes.

verato

The solution

Using Verato UMPI™ as an identity resolution service, the state’s HIE partnered with Verato to offer the state an updated roster of Medicaid patients.

They discovered that many children and families were eligible for the programs and not currently receiving benefits. After that, they utilized social determinants of health (SDOH) data and MPI services provided by Verato to look at other ways they could improve outcomes in their state.

The updated roster and relationship with the state allowed the HIE to help with even more initiatives, including: attaining new funding, enhancing analytics, reducing health inequities, and facilitating the state’s COVID-19 response.

“The true value of our relationship with Verato is that our organization now has the confidence to strategically use our data.”

– CEO of large western HIE

The results

Attained new funding

By providing an updated Medicaid roster to the state, the HIE enabled the state to get additional funding to correspond with the population that they serve.

Additionally, the HIE was able to compare the updated Medicaid roster to the roster for The Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) that the state runs, where eligibility requirements are nearly identical to Medicaid. The HIE was able to identify nearly 17,000 children who were eligible for the WIC program but not yet enrolled, amounting to nearly 37 million dollars in additional funding that the state was not currently utilizing that could be going towards feeding hungry children in the region.

Improved analytics

Verato provided curated data on social determinants of health (SDOH) and identity information management, which allowed the organizations to drastically improve analytics by identifying trends in their communities.

Only once public health organizations have a complete view of their populations can they do meaningful analytics, tailored outreach, comprehensive care coordination, and truly engage with the person.

Addressed health inequities

Demographic details and economic security factors have allowed the organizations to directly address health inequities, proactively sharing information about wellness and food assistance programs to the right groups, increasing education and effectively reaching out to the right patients to improve outcomes both in the short and long run.

By bolstering capabilities for data capture, enrichment and analysis, public health organizations become better positioned to address and eliminate inequities in health care access and care that threaten vulnerable populations.

Verato, the identity experts for healthcare, enables smarter growth, improved care quality and efficiency, and better population health by solving the problem that drives everything else – knowing who is who. Over 70 of the most respected brands in healthcare rely on Verato for a complete and trusted 360-degree view of the people they serve to accelerate the success of their digital health initiatives and fully understand consumers’ preferences, risks, and needs from the beginning and throughout their care journey. Only the Verato HITRUST-certified, next generation cloud identity platform enables interoperability across the complex digital health ecosystem with unprecedented accuracy, ease, and time-to-value. With an enterprise-wide single source of truth for identity, Verato ensures that you get identity right from the start.
